

ALUMINIUM SITTINGS

Our production of sittings for solarium/beaches began 25 years ago and in very little time it has completely substituted similar production we made in wood.

The main reason which allowed this fast acceptance from touristic operators market is the almost total absence of maintenance of these collections.

All the collection is projected and realized considering market to which it is produced: Hotels, resorts, SPA, sporting centers, beaches, swimming-pools.

All the collection for solarium/beaches is easy to move and easier to stock because they are folding products and so they take minimum space. Also, lightness of aluminium allows an easily movement of product from operator.

Frames of *Sunbeds, armchairs and deck-chairs* collection are all produced in anodized aluminium 15/18 microns which give them a very long duration (more than 20 years) and above all frame doesn't need maintenance.

These are materials used in our sittings collections:

- Anodized aluminium 15/18 microns (under request it's possible to have also fire epoxy dust painting in colours of RAL schedule).

- Rivets in inox steel aisi 304/316

- Mouvement mechanisms in charged nylon for outdoor use.

- Sitting fabric: in textilene gr.800/1200 sqm good to be used also in seaside and high mountain.

A new for year 20136 is a new collection where textilene is substituted from mattress fabric: a comfortable stuffed sitting where mattress is hermetically closed in the fabric. It bonds comfort and esthetic elegance to product.

A big range of fabrics colours allows integration of product in all sides.
